

Role vs Capability (High-Level)

Area	Admin	Manager	Customer
Program configuration	Full control of global loyalty settings	No global config; limited local campaigns	No configuration; only participates
Earning & redemption rules	Create/edit all rules	Execute rules; suggest local changes	Earn and redeem points under defined rules
Account visibility	All customers and all transactions	Customers within assigned unit/scope	Own account only (balance, history)
Manual adjustments	Full rights (with audit)	Limited, within defined thresholds	None
Analytics & reports	Global program analytics	Unit-level analytics	Simple personal statement (optional)
Security & roles	Create/assign roles and permissions	Cannot change global roles	Cannot change roles

Admin View – Detailed Requirements

Category	Requirement
Access & permissions	Can view and manage all loyalty settings, rules, and global program configurations.
	Can access all customer loyalty accounts and full transaction histories for audit/support.
Program configuration	Can create, enable/disable, and edit loyalty programs.
	Can set point value, minimum redeemable amount, and global expiry rules.
Earning rules	Can define purchase-based rules (per amount spent, per order, per category).
	Can define behavior-based rules (signup, first order, referrals, reviews, etc.).
	Can set conditions (thresholds, payment methods, date ranges, segments).
Redemption rules	Can define reward types (discounts, free items, vouchers, services) with required points.
	Can define constraints (max discount per order, allowed channels, blackout periods).
User & role management	Can create/assign Admin, Manager, Customer, Staff/CSR roles and their permissions.
	Can restrict sensitive operations (manual credit/debit) to certain roles only.
Monitoring & reporting	Can view dashboards of total points issued, redeemed, expired, and outstanding.
	Can run/export global reports for analytics and integration to other systems.
Audit & compliance	Can view audit logs of loyalty operations (rule changes, adjustments, redemptions).

	Can lock/deactivate loyalty accounts for fraud/misuse.
--	--

Manager View – Detailed Requirements

Category	Requirement
Access & permissions	Can view loyalty data only for assigned unit/branch/region.
	Cannot modify global program settings.
Operational controls	Can request or perform limited manual point adjustments within configured thresholds.
	Can configure local campaigns (e.g., double points days) within boundaries set by Admin.
Customer support	Can search customers (ID/phone/email) within scope and see their balance and recent transactions.
	Can assist customers with redemptions at POS or service channels.
Analytics & reporting	Can view unit-level performance: active members, balances, redemptions, campaign results.
	Can export unit-level reports for management and staff coaching.
Compliance & controls	Must follow global rules; cannot override expiry, value, or global constraints.

Customer View – Detailed Requirements

Category	Requirement
Access & enrolment	Can enroll into the loyalty program via portal, app, POS, or onboarding flows.
	Loyalty account is linked to CRM profile (contact/phone/email/member ID).
Balance & history	Can see current points balance in real time.
	Can view transaction history (earn/redeem entries with date, source, and amount).
Earning experience	Can see estimated points to be earned at cart/checkout per defined rules.
	Receives notifications when points are credited, including summary and expiry info.
Redemption experience	Can browse rewards catalog and see points required per reward.
	Can redeem points at checkout or via self-service and see updated balance immediately.
Account management	Can update basic profile information linked to loyalty within CRM policies.
	Can opt out/close loyalty account, following defined policy for remaining points (forfeit/grace).

Shared System Requirements (All Roles, Different Behaviour)

Area	Requirement
Data integrity	Maintain a single authoritative points balance per customer, updated by all earn/redeem operations.
Transaction ledger	Every point change recorded as immutable ledger entry (amount, type, date, source, reference).
Concurrency handling	Prevent race conditions and negative balances when multiple operations occur concurrently.
CRM integration	Loyalty must link to core CRM entities (Customer, Order, Invoice, Campaign, etc.).
External integration	Provide APIs/webhooks for external systems (POS, e-commerce, mobile apps) to award, query, and redeem points.
Security & privacy	Enforce least-privilege access; customers see only their own data; managers only their scope; admins all.
